Bring British Immigrants In

There are many questions affecting national policies in Canada with regard to which it is natural there should be wide divergences of opinion, but there is one subject, immigration, upon which it should be possible to find common ground. East and West and the Maritimes may differ in regard to tariff schedules, freight rates, railway construction policies, and harbor improvements, but one and all are vitally interested in the question of population and in its future possibilities.

Every Province in Canada still possesses large areas open to settlement and only awaiting people to bring them under cultivation and thus render them productive and a source of national wealth. Even the most thickly settled rural districts in Canada are capable of sustaining a denser population without reducing the standard of living. While in Northern Ontario and Quebec and in all four Western Provinces there are vast unoccupied areas. On the other hand, there are some millions more people in the British Isles than there are avenues of employment open to them. The British Government is therefore obliged to support these people in idleness, while the population grows on increasing in a greater ratio than the capabilities of the country to employ and support. Nor, in the changed industrial conditions which have resulted from the war, does there seem to be any possibility of a material improvement in this situation.

In times past the United States absorbed large numbers of immigrants from the British Isles, but under its quota system the doors of the big American republic are now practically closed. There is a good and sufficient reason for this. The new United States policy. Population since the war has now reached over 110,000,000, and the annual natural increase is 1,500,000. In other words, every recurring decennial census shows an increase in population of 15,000,000. Before long the figure will be 20,000,000. By far the larger portion of this increase is in the cities, with the result that the United States is rapidly reaching the point where it will no longer be a self-contained and self-sustaining nation able to feed its own people. It has, therefore, and quite naturally, called a halt to immigration.

Canada, however, occupies an entirely different position. Our population is small and our territory large, and for the most part unutilized. It is open to serious question whether Canada is morally justified in rigidly restricting immigration, and holding large areas unsettled and idle, when millions in the British Isles lack employment because there is none to be had. Canada may feel that it is not called upon to contribute to the upkeep of the British Navy, and that it should not obligate itself to participate in the defense of the Empire as a whole, and in other respects should not be expected to adopt policies purely from an Empire standpoint. But situated as the Dominion is in the matter of population and vacant territory it can hardly be denied that, so long as it is part of the Empire, it has some responsibility for the welfare of all British people.

At the present time Canada could render no better service to the Empire, and incidentally to itself, than by evolving and putting into effect a well-considered plan whereby a large number of people from the British Isles could be transferred to this Dominion. Something is being done, but not nearly enough. At present we are only nibbling at immigration, instead of going into it in wholesale fashion.

True there are matters which it would be a mistake to bring to Canada or send elsewhere. There are those who by reason of physical handicaps could not succeed in this country. There are others whose whole training is not calculated to enable them to adapt themselves to any other environment than the one they are now in. But there are thousands who could and would succeed in Canada if the means were provided to get them here and give them a fair start.

Canada's doors should be wide open to any Anglo-Saxon capable and willing to work. Let there be health tests to keep out the mentally, morally and physically unfit. Let there be educational tests to see if immigrants, past or not, have should not be a factor deciding fit or his eligibility to enter Canada.

Some Trade Unions may take a shortsighted and narrow view of immigration, but let them fear that an influx of immigrants would jeopardize their own jobs, but past experience has proved such fears to be groundless. Western Canada, at all events, should make it the new Parliament to be elected on October 23 grapple with this question, and make provision for an entirely new and better era in immigration.

Lived To Great Age

With the passing of Mrs. Charlotte Williams in her 210th year, the longest life of any woman in the world, that there was broken the circle of six persons, all living within a radius of four miles, whose ages have been estimated to 523 years. Four survivors have ruled over the British Empire during the life of these six persons, all of whom were given and this part of the country.

Price Right Elevator

The 1,200-horse-power Government terminal grain elevator being built at Prince Rupert will be completed by November 11, when a final shipment of five carloads of grain will be made through it.

Many Auto Accidents

In United States

Records Show That Two Are Killed

Every Hour in Day

The death rate in the United States due to automobile accidents leads the world, being 14.1 fatalities for every 100,000 population against 5.2 in England and Wales, 4.3 in Scotland, 4.6 in New Zealand and 3.4 in Canada.

Figure 124 shows that for 1928 American cities, the automobile accident death rate was 19.4 per 100,000 population, or more than 17,400 deaths in automobile accidents, not counting accidents which involved railroads, or street cars, and automobiles.

The toll of human life taken by motor vehicles in the United States is at the rate of more than two for every hour in the day. These statistics have been compiled by the National Safety Council for consideration at the Fourteenth Annual Congress which opened at Cleveland on Sept. 23.

Neuralgia Conquered

Its Pain Destroyed

Magical Results Come When You Apply

NERVINE

It Acts Quickly

Mr. W. T. Greenway, formerly connected with the United States Postal Service, has written: "For twenty years we have used NERVINE in our homes, and for the world we would be without it. As a remedy for all pain, neuralgia, toothache, cramps and indigestion, I know of no preparation so effective as this. I have used NERVINE for many years, and I can say that it will give you prompt results—50¢ at all dealers."

Easy Job Pays Well

In London one man has made close to \$10,000 a year by buying other men on what he calls to wear. It is a man who has a complete set of clothing in his closet. He accompanies him on his rounds of the shops and selects the proper colors, styles, etc.

Orange Free State Is Rich

Became Definitely British Just

Twenty-five Years Ago

The Orange, 25 years ago, was the Province of Wales recently visited, in one of the "babes" of the British Empire. It became definitely British only in 1900—just twenty-five years ago.

At this place, however, the Prince saw the "shining stones" as the British call the diamonds, dug out of the earth, washed, sorted and finally polished.

The tunnels in the mines are lighted by electricity and ventilated by compressed air, which is blown into the mine from the exhaust of the world.

The temptation among the workers to steal a diamond is great, yet few do it.

Even if a native did steal a stone it would be of no use to him. He cannot sell it, he is charged with it, and all diamond dealers must be registered and licensed, and no black man does not dare to take a precious stone to a respectable white man.

Not only has the Orange Free State its mineral wealth. It possesses also some ten million sheep, one and a half million cattle, half a million Angora goats, a quarter of a million horses, and also over ten thousand ostriches.

B.C. Lumber Shipments

The total water-borne shipment of British Columbia lumber for the first six months of the current year totalled 2,519,132 feet, as compared with 2,100,000 feet during the corresponding period of last year, or 124 per cent of last movement, or 124 per cent of last year's total.

Lady Cynthia Mosley Is a Socialist

Daughter of Marguerite Curzon Accepts

Lady Cynthia Mosley is proud to have been asked to run for the parliamentary seat in a constituency, made up mostly of miners, on the Labour ticket.

She is a socialist and glories in the fact.

This daughter of the late Marguerite Curzon and her wife, made this statement in addressing a meeting of the electors which endorsed her candidature.

"Conrades," said Lady Cynthia, "some of you do not know me very well, and still wonder why an earl's daughter is in the socialist movement. The other side is always taunting me with the query: 'What have you in common with the working women?'"

"Well, I have a husband and two little children, and I know what it is like to be a mother and a wife, and I know what it is like to be a worker on the land; I have taken a course in economics in a London school and have had my eyes opened in London slums."

"I do not want to go into family troubles, but it was a bit of a headache for my husband and me when we left the Conservative party."

"I prefer being labelled a socialist rather than a laborer, because I am a socialist—through and through, and am proud of it."

To Ship Many Cattle
The Livestock Producers' Ltd., at Edmonton first which shipped many cattle to the Old Country market last winter, plans now to dispatch 25,000 head of cattle for the British market, according to plans announced by the president of the company.

Grandmother: "Johnny, I wouldn't slide down those stairs."
Johnny: "I know it."

Child Welfare
Big Brother and Sister Scheme for Immigrant Children

The Department of Immigration and the Canadian Council on Child Welfare, are planning a big brother and sister scheme for immigrant children, by which responsible members of organizations in the locality where the children, who are to be adopted, are to be placed.

It is stated that the department of immigration has acted on the Dendfield report, in that improved medical inspection of children is required in London, and everything possible is being done to improve the mental state.

The department is taking up with immigration societies the necessity of inspecting the homes of applicants for child immigration, and the necessity of immigration societies are here to discuss the restriction of passage grants for unaccompanied children over 14 years of age.

Externally and internally, it is good. When applied externally by brisk rubbing, Dr. Thomas' Electric Oil opens the pores and penetrates the tissue, touching the seat of the trouble and forcing it out. It is a powerful antiseptic, it will still the irritation, soothe the inflamed skin, and relieve the itching and the respiratory organs of the throat.

We Do Nothing
In five years the British forestry department has planted 17,000 acres in fir and spruce trees for the benefit of future generations at a cost of \$1,000,000 a year. That is nothing. In Canada we can save trees in five years in three months and not care a boot about the cost.

The Growth Of Radio

Ten Million Sets Predicted For U. S.

By Year 1930

Predicting an expenditure of \$150,000,000 for radio by the "fans" of the nation during 1929, experts have estimated that by 1930 there will be 10,000,000 receiving sets in operation in the country. Five years ago, approximately 1,000,000 was spent for radio apparatus, and last year the amount had increased almost 175 times that figure.

In 1923, there were 145,000 sets in use on the farms, and ten years later the number had more than doubled. At the beginning of the industry, all apparatus were assembled by the owners, but with the steady development of parts and hookups, the volume of ready-built instruments purchased increased until about forty per cent are now sold ready to tune in. To supply the more than 1,000,000 homes now equipped with receiving sets, power programmes are broadcast from 562 stations—Popular Mechanics.

RHEUMATIC PEOPLE
CAN NOW FIND RELIEF

By Driving the Poisonous Acid From the System

Rheumatism attacks people when the blood is thin and water is charged with impurities, thus setting up the poisons of the muscles. Cold, wet weather or sharp winds may bring on the pain, but the cause is in the blood and it is to be relieved by the blood.

Increasing Interest Is Taken In Great Britain In Respect To Emigration To Canada

"This century will witness a development in Canada in all ways similar and equal to the development in the United States in the 19th century," a writer in *The Outlook* declares, and he adds: "To the United Kingdom the present policy is maintained, of encouraging the immigration only of the Nordic races, Canada will produce a finer nation than the one in the making in the United States, where a policy of indiscriminate admission of immigrants was pursued until recently."

The same writer pleads for the encouragement of the "gentlemanly adventure," the type of immigration with character and a moderate capital. He deprecates the fact that the young men now at home seem to be occupied mainly in dancing and games.

The London *Spotlight* publishes two letters with regard to emigration to Canada. The organizing director of the newly-constituted Anglican council of overseas settlements, writes to the *Spotlight* for funds to carry on the work of the organization and declares that the Anglican church is devoting all her moral and financial forces for the linking-up of immigrants in the Dominion of Canada and helping them financially where this is necessary.

Poultry Industry In Alberta

Production Last Year Was Worth Three Million Dollars
Alberta's rapid expansion of mixed farming province in recent years has brought about a development of branches of farming hitherto neglected, especially that of poultry raising. Three years ago this province was a heavy importer of eggs and other poultry products in order to meet domestic requirements, but the farmers, realizing that poultry raising was a valuable adjunct to their regular activities, have lately increased production to such a degree that the province produced over 20,000,000 dozen eggs of a value of \$2,500,000. In addition there are 5,500,000 pounds of live and dressed poultry, worth \$3,120,000, were handled by commercial dealers, making a total production for the year of \$1,810,000.

Good Friend To Man

Spiders Are Most Useful and Should Be Protected
The prudent states of spiders make them most useful to man. "Our selfish interests should preserve and protect them, except when they annoy us," the housewife by building dust-catching and unsightly webs indoors. Even then they might be given a place. All forms are different in color and in their kind, and were it not for their numerous enemies, there would be enough spiders to make a considerable over-production of noxious insects. In comparison to the insects there are few spiders, and of these few spiders, only a few are dangerous to the individual. Considering the number of eggs spiders lay and the protective care they give their eggs, this seems surprising. But when we consider the countless variety of birds, sheep, roads, snakes, hawks, robbers, certain parasitic insects and, most particularly, most dander and elgion wasps, it is more surprising that spiders exist at all.

Canada's Greatest Asset

Only about 15 per cent. of our available wheat lands are in use. If with so small a part of our wheat acreage in use we can be the greatest of wheat exporting countries, what a future awaits us agriculturally when fifty or seventy-five per cent. of our wheat lands are in cultivation? What is the value in Canada of wheat acreage of all. And the swiftest way to property is by way of greater wheat production.—Toronto Star.

Footpasts From Afar

Members of the Oxford University football expedition found that they could hike up the hills of the dangerous feet at the Navy Hotel, London, approximately 2,000 miles away.

Reparations Paid

Germany's total reparations during the first year of the operation of the Dawes plan amounted to 1,488,000,000 gold marks, or about \$23,000,000,000. Of this sum the agent-general for reparations paid to various allied creditors \$95,500,000 gold marks.

Controlling Hog Cholera In Canada

Stringent Methods Have Practically Eradicated This Troublesome Disease

Strict adherence to a definite policy in dealing with hog cholera has enabled the health of animals branch of the department of agriculture to practically eradicate this troublesome disease from Canada. In six provinces there was not a single outbreak in the year ending March 31, 1925, and several slight outbreaks in the other three provinces were controlled and eradicated.

The report of the veterinary director general, which may be obtained from the publication branch, department of agriculture, Ottawa, describes the procedure followed in coping with the disease. When cholera is found to exist all hogs showing symptoms of illness are promptly slaughtered and the carcasses destroyed and the premises thoroughly disinfected. All other hogs on the premises and on those adjoining are quarantined and then treated. When the quarantine restrictions are removed compensation is paid for the slaughtered hogs unless it is shown that the owner has been feeding collected garbage, as the feeding of garbage obtained from premises other than those in which it is fed, is prohibited, except under license.

Farmers To Get Surplus

Pooled Grain Will Be Handled At Lowest Possible Cost

In a notice to its 450 local secretaries throughout the province, the Saskatchewan Co-operative Elevator company has stated that any surplus remaining after the costs of operation have been deducted from pooled wheat will be received by the farmers. The company points out to its secretaries that the pooled grain is being collected from the pooling farmer, and any surplus accruing under the agreement will of course be paid to those from whom it was received.

The pooled grain passing through the company's elevators will be handled at the lowest cost possible, and you may assure all who are concerned that the growers delivering pooled grain through these elevators will receive any surplus remaining after deducting the cost of operation."

Many Students Will Attend

Record Enrollment Expected At Alberta Government Farms
Enrollments at the three government farm schools at Vermilion, Olds and Claresholm are likely to go far beyond those of last year, and a record for a record registration are said to be more than good. Applications are already coming in from all parts of the province, and improved conditions among the farmers as a result of the agreement with co-operatives, and the evident desire of farm young people to take agricultural training.

"It is expected that the three schools will be filled practically to capacity, which means a total enrollment of 450, as against 225 last year."

Hemp Growing In Manitoba

Heavy growth from seed imported from Canada is gathered in the time in Manitoba, has produced an excellent quality of full matured seed, according to a statement issued by the K. Key Company. The indications are that this hemp will prove a heavy yielder of seed, thereby doing away with the need of further importations.

Standard Turkey Grades

Uniform Description To Be Used By Three Prairie Provinces

Discussion of poultry grading by representatives of the three prairie provinces at a conference held recently in Regina, led to a decision to adopt uniform descriptions of agricultural products that agreement had been reached on the description for turkey grades to be used in Manitoba, Saskatchewan and Alberta this fall.

A wire sent to Dr. Grisdale, deputy minister of the Dominion department of agriculture, after the conference, said the following terminology for turkey grades will be used in the three prairie provinces this fall: Specials, No. 1, No. 2 and calls.

It is expected that the Dominion department of agriculture will supply inspectors for the voluntary inspection of dressed turkey this season.

Whereas various names have been used for turkey grades, some numbers of the trade using "Pancy, select No. 1, select No. 2." By the use of uniform terminology traders in Eastern Canada and the United States will know what they are purchasing and some confusion will be avoided.

The conference also discussed the question of uniform packs for dressed poultry, and the proper kind of dressing the cars for the shipment of dressed birds.

During the conference it transpired that the turkey crop this year was not going to be quite as large as anticipated and that the birds have not reached maturity as quickly as expected.

Cheese And Also Butter

Canadian Product Is At A Premium On The British Market

Not for some years, says the News Letter of the Dominion dairy and cold storage board, dated September 1, has Canadian cheese commanded as great a premium over the New Zealand product during the past few months. Cutting the fractions the New Letter's quotations are, in shillings per 125 lbs: White cheese, Canadian, 95 to 95; New Zealand, 94 to 94; colored cheese, Canadian, 95 to 95; New Zealand, 94 to 94.

The News Letter also calls attention to the fact that the United States is rigorously enforcing the legal standard of the composition of butter, which are the same as in Canada, namely a maximum water content of 16 per cent. and a minimum fat content of 50 per cent.

Crop Handling Suggestion

Ben Smith Says Canadian Pools Should Enter Arrangement With British Government

That the Canadian pooling associations should arrange with the British Government to handle a fixed proportion of the Canadian crop on a five-year contract at fixed prices is one of the conclusions arrived at by Ben Smith, British Labor M.P., as a result of his tour of the Dominion.

Mr. Smith also believes that British immigrants would be encouraged to live in this country if it were possible for them to have some community life than is now the case.

A German air service between Japan and Japan, via Irkutsk and Peking, will be established next year, according to an announcement of the Aeroflot Company.

The first electric lamp was marketed about 1860.

Enormous Amount Of Land Held In Western Provinces To Provide Network Of Highways

Chilled Meat Trade

Ontario Plans To Build Up Exporting Business With Britain

The agricultural committee of the Ontario Legislature is in possession of a plan to establish a "meat chilling" and exporting business from Canada, with a view to supplying Britain with some portion of her fresh foodstuffs.

This plan has been submitted to the British premier and the Imperial economic committee by Major Palmer of Vancouver, and has, within the last few days, been sent to the agricultural committee from Vancouver. Amongst other suggestions, the plan calls for the establishment in Britain of 100 retail depots for the disposal of chilled meat and other products. It suggests central and cold storage depots in Canada, and the plan, as outlined, involves an expenditure of \$2,500,000.

The agricultural committee of Ontario proposes to act through the Dominion Government for the purpose of having one or more executive representatives of the Imperial economic committee in Canada. When they arrive, the agricultural committee of Ontario will arrange to have Major Palmer, of Vancouver, on hand to discuss the plan and to see that the economic committee.

What Wembley Has Accomplished

Brought Home A Line of Buying Empire Made Goods

If Wembley has done nothing else, and could it have done anything greater—it has brought right home to innumerable English women a sense that the British Empire is one family and that membership of it is a real partnership among our far-scattered Commonwealths. One notice of the attitude among women shopping there are very keen in their quest for goods to improve the goods from. One often hears a shopper say: "Are you sure it's made in the Dominion? I want empire goods." A quick change in the contents of many shop shelves is being hastily effected to meet this new demand for everything that British and overseas manufacturers can supply. It is Imperial preference in the most practical broad-and-better form that closer trading within the empire could see. Yes, Wembley has taught us that we are all one family, and that we can "keep the money in the family" only by dealing in the empire shop.

Taking No Chances

A tall, nervous looking man rushed into the grocer's shop in a village. "Sell me all the stale eggs you have," he demanded. "Well, I don't usually sell stale eggs," said the grocer, "but I could if you have some if you're not."

"I must have all you've got." "I suppose you're going to use them all at the village hall tonight," said the grocer knowingly.

"Thank," said the stranger, glancing around nervously. "I am Hamlet."

A politician may make your hand one day and your neck the next.

Motor Traffic Has Focused so much attention in recent years upon roadways

Motor traffic has focused so much attention in recent years upon roadways and highways that little thought has been given to other features of this system of communication. The study of a road map of Canada necessarily affords a picture of the enormous amount of land that has to be covered in each of the provinces to provide the network of highways.

In a recently issued pamphlet on the natural resources of the prairie provinces, the natural resources intelligence service of the department of the interior gives some interesting figures concerning the subdivision of the surveyed areas of Manitoba, Saskatchewan and Alberta. Of the total area already surveyed 2,734,000 acres have been set aside for other purposes, and an area two and one-half times the total area of Canada's smallest province, the New Brunswick, which contains 1,257,700 acres.

All original surveys in the prairie provinces are made by the department of the interior under the authorization of Hon. Charles Stewart, minister of interior. In the first system of survey the width of road allowances was established at 99 feet. Later this was found to be excessive, and the road allowance was reduced to 66 feet, roads, being provided at every mile, east and west and north and south. Later it was found that the age to restrict the road allowance east and west to every two miles. When applied to the road allowances since this system was adopted it represents an enormous addition to the prairie cultivable areas. It had the further advantage in reducing the cost of upkeep of highways. The cutting of weeds on the wide road allowances installed every 100 feet, which had been much weed cutting was neglected. These road allowances contained a great deal of valuable land, and throughout the prairie provinces crops are now being grown on what under the older systems of survey would be unnecessary road allowances.

Danish Competition In Butter

Growth Of Dominion Butter Export Trade Alarms Denmark

Lord Bessborough, the former, dairymen, representatives of export associations and private exporters, assembled at Copenhagen to discuss, under the presidency of the minister of agriculture to discuss the export of butter to foreign countries, particularly Great Britain. The speakers all emphasized that the heavy increase in the imports of butter from the British Isles is a cause for concern, and that the "systematic agitation organized in England for enhanced marketing of the butter of the British Isles" was being conducted to greatly intensify the competition with Danish butter.

The meeting decided that every energy must be exerted to prevent any justifiable complaints against Danish butter. The minister of agriculture submitted a draft of legislation proposed to deal with the marketing of Danish dairy products. The details, however, were not divulged.

Statesmen's Opportunity

Canada is a country hard to govern. But it offers great opportunities for real statesmanship. Leadership is the least conspicuous of conditions, that grasps reality and fearlessly with problems, that declines to drift, that puts public interest before party profit, that redresses real grievances, that practices conciliation and prescribes concord, that thinks and plans and acts nationally—such leadership means more to the Dominion and its citizenship these days than any other asset in statecraft.—Toronto Globe.

A Business Woman

Being elected chairman of one of the largest eating firms in the world, Mrs. Thomson-Proctor, an Englishwoman, has given proof of woman's advancement in the commercial and industrial world. This lady is also vice-chairman of a very well-known art publishing firm.

An Ancient Pet

Mrs. Edith M. Barker has inherited a "Lost" advertisement in all the papers of Brookhaven, L.I., for the return of a pet turtle which she had owned for a pet of the family for 200 years. She thinks some thoughtless motorist carried the turtle away.

It is not always wise to tell all one knows, but it is well to know all one can.

The City of Quebec as Seen from the Air

Saskatchewan Corn Show

Corn Crop This Year Reported To Be Uniformly Good

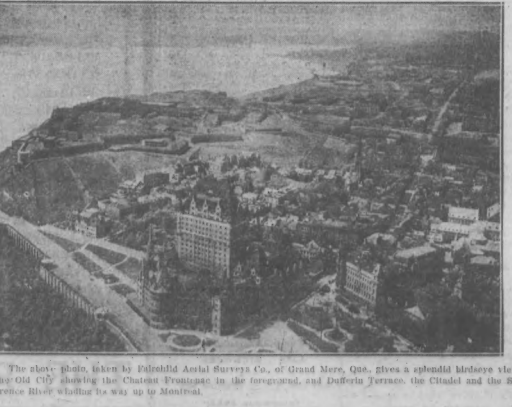

Arrangements for now practically completed for the annual Saskatchewan corn show, which is to be held at Regina, Sask., from Sept. 11 and 12, according to a letter recently received at the field crops branch of the department of agriculture, from Mr. G. D. Mathews, secretary of the Saskatchewan Corn Growers' Association. As the corn crop this year throughout the province is reported as being uniformly good, Mr. Mathews, field crops commissioner, is confident that after the rather poor season of 1924, this crop is back to normal again, and anticipations of a good exhibition are running high.

B.C. Onions For New Zealand

A new export cargo, in the form of onions from the Okanagan Valley, left Vancouver recently for New Zealand. The shipment amounted to about six tons, and was known about as a result of the favorable showing made by a small lot of B.C. onions to that market last year.

How many men and women everywhere spend a good deal of their time taking they were playing some other role in the never-ending drama of life?

Life is full of checks and mazes of them are forgotten.

The above photo, taken by Edith M. Barker, of Grand Mere, Que., gives a splendid birdseye view of the old city showing the Chateau Frontenac in the foreground, and DuRoi's Terrace, the Citadel and the St. Lawrence River with the way up to Montreal.

Sweet Clover In Crop Rotation

Cropping System Recommended to Maintain Fertility of the Soil

Writing on "Sweet Clover in Crop Rotation," in *Pamphlet No. 52*, Mr. M. A. Dorick, of the Brandon, Man., Dominion experimental farm, suggests that if grain growing is to be continuous on the prairies as the basic agricultural industry it may be necessary to establish some systematic arrangement of crops so that there may be alternation with grasses and clovers in order that weeds, plant diseases and insect pests can be effectively controlled. He adds that where clover is grown once in from three to six years the at root zone of the soil is likely to be maintained and possibly increased.

Mr. Dorick suggests as an outline for a rotation on a stock farm, or on a portion of a grain farm near the residence to provide pasture for horses and milk cows, the heretofore rotation might be followed:

First year, summerharvest; second year, wheat (half area seeded down to sweet clover); third year, half field corn and half field sweet clover.

In carrying out this rotation, Mr. Dorick explains, the field is divided into three parts, one-third summerharvest, one-third wheat (half seeded down to sweet clover) with the remainder of the farm in corn and sweet clover. When the three years were up the sweet clover should be grown on the half of the area which had no sweet clover in this, the first cycle.

Continuing, Mr. Dorick gives the following as a suggested rotation "where large amounts of pasture are required:

First year, sweet clover sown with oats in early spring; second year, pasture ploughed up and seeded down to sweet clover; third year, oats; fourth year, oats; fifth year, corn.

In this cropping system three-fifths of the farm are in forage crops each year. In this pamphlet, which can be had free by addressing the Dominion experimental farm, Brandon, Man., the author goes very fully into the cultivation, uses and treatment of sweet clover.

Broadcasting In Ancient India

Simple Method Used By Emperor in Third Century B.C.

Though serials and crystal sets were unknown in ancient India, it had its own method of broadcasting. This was a simple one, unencumbered with atmospheric conditions and wave lengths, in essence it consisted of placing the placards being of gold stone.

This curious form of "wireless" was used by the great Emperor Ashoka long ago as the third century B.C. Ashoka, a son of a king of India, emperor of India in 248 B.C. He was so impressed by its splendid results that, if tradition be true, he had them broadcast as oracles on top of his 6,000 stone pillars or stupa, which were subsequently set up throughout his empire for the improvement of his subjects. Of these, 400 remained, only six now remain, two each at Delhi and Lahore and one each at Allahabad and Benares.

A Remarkable Auction Sale

Every 21 Years Old English Custom Is Revisited

A remarkable auction sale is announced to take place at Chesham, near Bridgewater, England.

The auction, which is held every 21 years, is for the selling of "Church Acre," land in 1489 by one year, with instructions that the sale should take place during the burning of half an acre of rye, the last holder prior to the candle being consumed becoming the purchaser.

The one-acre was varied in the rye and churchwardens for the time being, to be expended as they think fit upon repairs to the village church. For four centuries the custom has been observed.

The half-acre of candle rye upon a fiver of the place, upon an upward of egg cup. As the auction applies a match to the wick the company make the old custom of the Manor House into the wick of a large candle.

Life is mostly hard and bleak; Two things stand like a stone, kindness in another's trial, courage in your own.

W. N. L. 1297

Thought Court Summons Was Too Undignified

Gentleman of Independent Means Writes Letter to Magistrate

After a journey of 100 miles, described as a gentleman of independent means, living at 1000 Main Street, Pittsburgh, was summoned before the New York bench of magistrates for causing an obstruction with his auto. He did not attend, but sent the magistrate a letter, which read in part as follows:

"I received the enclosed summons today at my father's, 1812, Richard Maguire, Bart's, house, and should be very much obliged if you would be good enough to have my full name, and proper designation, inserted therein. I think you will find it, it would not be putting you to too much trouble in looking up Burke's Peerage and Harcourt, that belong the eldest and only son of my father, I am entitled to the designation after my name of 'Esquire,' although no duty of the inspector who was so very rude to me on the 15th of July last still considers it a scandalous outcast, and not even entitled to be addressed as 'Sir,' which I believe it is the duty of an inspector and ordinary constable, while speaking to a gentleman to address him and speak to him as 'Sir.'"

"I recently saw my cousin, Lord Hastings, about the matter, and he advised me to take up the whole matter, which I intend to do, and if which I will, consequently, you are unable to deal with the matter in the right way, I shall go and see the Lord Lieutenant and explain about the whole matter, whom I know personally very well, and he will advise me as to the best course to be adopted."

The mayor of New York, as chairman of the magistrature, read the letter in open court, and offered the following comment:

"I am really sorry for the man who writes such a letter as this. In a few years with his staff, as we all shall do, and this case is very touchy."

A fine of 10s. and 10s. costs was imposed, the Lord Justice saying that he would treat it as an offence of an ordinary man being and with due regard to Mr. Maguire's dignity.

Airship Designers Are Not Deceived

Lessons Learned From Disasters Will Lead to Ultimate Victory

Against the airship, what has the airship designer? "During the Great War," says a German expert, "the airship was used in Germany to England summer and winter. Only three or four were brought down, but they were not lost, got away back were seriously damaged by shrapnel. They proved that they were able to stand an astonishing amount of injury and yet remain aloft. A British-built airship was shot from the air, lost a few months ago, her nose crumpled up, and she was swept across the Dutch coast by a storm ship. For sixteen hours she buffeted the elements and made her way again with very few men. The British airship, R-23, crossed the Atlantic and returned, and a German craft also flew the United States. It is thus striking evidence of the capacity of airships for long flights, even when crippled, and when engineering skill has achieved so much it is not likely that airship designers and navigators will admit they are beaten and decide to withdraw. The lessons are deplorable, but from each one of them something is learned that contributes to ultimate victory."

A Canadian Heroine

Girl Who Frustrated Enemy's Plans In War of 1812

Sunday, Sept. 12, was the 100th anniversary of the death of Laura Secord, Canadian heroine of Beaver Dams in the war of 1812. At the risk of her life, this girl carried a message through the danger zone that saved the day for her countrymen. According to history, Laura Secord obtained word of the enemy's plans of action at Beaver Dams, and without thinking of the overwhelming chances of the loss of her own life, hurried through the greatest of dangers to Col. Vintcent, of the Canadian forces with the information. To her efforts the enemy's battle plans were frustrated. Chief among the many commemorations with which this heroine has been honored is a monument at Queenston Heights.

To Study Conditions Here

To ascertain at first-hand the true conditions which exist in Canada to-day, Captain Victor Cassel, M.P., member of the British House of Commons for Chipcham, and parliamentary secretary to the president of the board of trade, Mr. Philip Campbell, is making a tour of the Dominion.

The world's largest hotel, weighing 125 cars, has been brought to New York.

Aniline Dye Was Named After Battle

Discovered In Year of Great Conflict Between France and Austria

How many people associate this term with the great battle which was fought between the French and Austrians sixty-six years ago. The famous aniline dye received its name from this battle, Mr. W. H. Perkins, having discovered it in the year in which this battle was fought, 1855. He may be correctly said to be the founder of the modern industry of the color of the dyes. It was in 1855, the celebration of the battle of the day, that it was announced that no fewer than 70 separate and distinctive coloring matters can be obtained from these coal tar products. The first color, which Mr. W. H. Perkins received, in procuring from aniline received the name of aniline.

Black Maria's Carriage

New Police Wagon Came to Have This Name

The reason why police wagons are called "Black Maria" is said to be explained in the following article. About 1835 or 1840 there resided in New York City a woman of African descent and a blacksmith had built the classic name of Maria. Her spouse were elegant, and she was beautiful. Whenever she indulged she was always mobbed by the police. They invariably had to put her in a wagon to take her to the station house. This thing, occurring so often, the vehicle was called "Black Maria's carriage." Therefrom the name of the whole class came to be called the "Black Maria."

Queen Mary's Notebooks

Queen Mary has adopted a new style in her private notebook. When Mrs. Bamber-Whitely, who was a maid of honor to the Queen before she married King George, was a young woman, some years ago, sent her some flowers the other day, the Queen replied to her by a note which was written in the Queen's favorite corner of the Palace.

Not In Any Hurry

"Come," cried the French in the United States in 1914. And they took their time. "Come across" seemed quite a long time, to France in 1915.

Spent Whole Life In One House

Mrs. Marian Osborne, a Berkeley, Cal., has just died in the house in which she was born 70 years ago. She never spent a night away from home.

Butter From Western Canada

Estimated That This Year's Production Will Amount to Fifty-five Million Pounds

During 1914 the three prairie provinces of Alberta, Saskatchewan and Manitoba produced nearly 50,000,000 pounds of creamy butter. Of these, several million pounds were exported to Great Britain and to Japan and Canada. This year's combined production of the prairie provinces is estimated at 50,000,000 pounds. It is very probable that within five or ten years the output of butter from the prairie will equal 100,000,000 pounds a year.

British Columbia is not yet in the butter-exporting business but its production has doubled in the past few years.

In the better export from Canada, however, Vancouver is now figuring prominently. Only a few weeks ago one Western Canadian packing house that deals in all kinds of meat and dairy products shipped about 6,000 boxes, or approximately 130 tons of butter from Alberta through the port of Vancouver to London. Recently, also, an Edmonton, Alberta, dairy shipped direct 140,000 pounds of butter to Vancouver to the London market. This Canadian butter was very favorably commented on by the British inspectors. It met with a good reception by the consuming public, and it may be expected that further large shipments from the west will be sent to the British market before the end of the year.

New Jersey Importation

Seren Jersey hatters from the Island of Jersey have reached the Fraser Valley, B.C., and are now with the David Spencer here at Port Moody. They were purchased by Colonel H. H. Spencer, who is now in the Fraser Valley, B.C., and are now with the David Spencer here at Port Moody.

England has just celebrated the hundredth anniversary of the birth of Richard Doolittle Blackmore, author of *Lorna Doone*. Blackmore died in 1900.

Spent Whole Life In One House

Mrs. Marian Osborne, a Berkeley, Cal., has just died in the house in which she was born 70 years ago. She never spent a night away from home.

Centenary Of London Buses

First Real Omnibus Was Put On Streets In London In 1825

Among the numerous centenaries which may be celebrated this year if anyone feels disposed, is that of the omnibus.

The omnibus "for all" was, of course, a direct descendant of the stage coach, which flourished in England until it was superseded by the railway. But the first real omnibus, carrying passengers for short distances in towns, seems to have been put on the streets in London in the summer of 1825.

Mr. Shillibier, formerly a coachmaker in Paris, started a line of buses in London in 1825, the route being from Paddington to the Bank, and the fare one shilling "all the way."

After that the development was fairly rapid, and seats on the roof became common. It was not until 1855 that the L.C.C. came into existence, absorbing a number of smaller firms and beginning with 599 buses.

More Than Hard Work

Writing Is Not Easy Even For Talented People

"Writing is not hard work," modestly says Cora Harris, who writes very well indeed. Of course it is no more than that. Most people cannot write well, no matter how hard they try. But also, no one, however talented, can write well without hard work. Language may be to read is necessarily hard to write. And the knowledge, the thought, the feeling, the imagination, the experience of life, without which there is nothing to write about—these only after exceedingly hard work. Writing is a talent, a trade, an art and a life. Only the intensest concentration of all these can produce anything worthy of the name. Efficient Record.

Encouragement To Art

As an encouragement to Canadian art, the Winnipeg war memorial committee has decided to conduct a competition for a memorial design for the proposed cenotaph in that city. All British subjects resident in the Dominion will be qualified to enter the competition which closes on December 1, 1925. A prize of approximately \$500 will be given to the successful competitor.

Freezing Temperature of Salt Water

Freezing temperature of salt water is four degrees lower than that of fresh water.

Tourist Business Is Profitable

Enormous Bums Annually Brought to Home Many Persons in Canada Have No Idea of Where the American Tourist of Pittsburgh Is

Probably not very many. Yet Pittsburgh is not in the class of rich centers as New York and Chicago, Philadelphia, St. Louis, and Los Angeles.

Yet Pittsburgh—a Massachusetts city of some forty thousand—is a pretty lively center of interest in Canada.

Not long ago Hon. Chas. Stewart, minister of the interior, had a sketch map published and widely distributed showing the main automobile routes connecting Canada and the United States. One of these maps reached the secretary of the automobile club of Pittsburgh, and he promptly wrote back saying:

"If you spare one hundred of these maps we would be pleased to receive them as we are receiving calls daily for road maps of Canada."

And what is true of Pittsburgh is merely typical. It is equally true of literally scores and hundreds of American cities. The tourist trade is one of the great sources of income of Canada by American motorists comes from all directions—from New York, from the great cities of the States, the Mississippi Valley and the Pacific Northwest. Clear across the States, there is town after town and city after city where the tourist trade and Canada and how to get there is eagerly sought.

What this tourist trade coming to the Dominion is worth financially in a year is a fairly problem to figure out. Last year it is estimated that 1,000,000 per annum for the whole Dominion. Mr. J. D. Macdonald, president of the Canadian Automobile Association, predicts that Canada's tourist trade will reach 1,500,000 annually.

It doesn't matter much what the exact number is. The tourist trade is plainly one of the greatest business developments that has struck the Dominion in many years, and the chief reason for this is that the tourist trade in regard to it has not so much in the actual value of the present volume of business as in the fact that it has opened up Canada's natural recreational attractions are brought to the attention of prospective tourists from abroad no less than from the interior of the Dominion's resources in agricultural lands, in waterpower and other physical resources, and the tourist trade is the policy of prospective settlers, investors and business men generally.

King Does Not Like Fishing

Very Rarely He Indulges In This Sport

I am rather amused to read a long account as to the fishing rods possessed by the King, and as to recent purchases for His Majesty of up-to-date American split-rod salmon rods. As a matter of fact the King has no interest in fishing, and has not been very rarely indeed that he throws a fly, though the Duke of Windsor, of the House of Windsor, is a keen angler in the autumn. Occasionally, however, His Majesty has a cast on some of the other bill lakes in which trout abound. They are small, but easy to take, and they give good enough sport. It is a common thing to land three at a time.

The High Standard of Luxuries

There is no gaudiness that the industrial system encourages extravagance by families that are not able to afford them. This country enjoys a standard of living that is higher than the rest of the world and higher than any period in our history, but it is not always something to boast about. Leisurely and slow motion than the more money paid for them—Leisurely Court Journal.

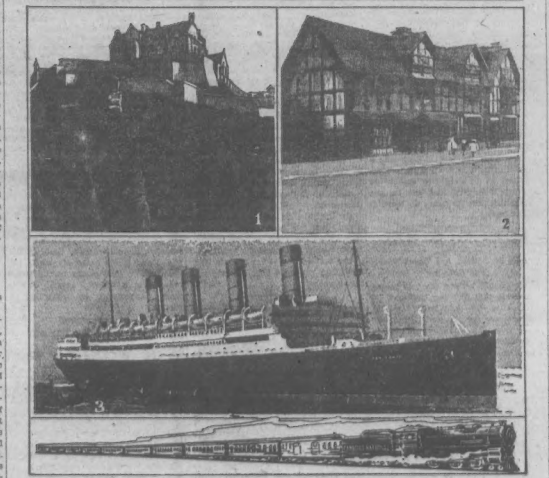

How Growing In B.C.

The yield of hops in British Columbia during 1924 amounted to 112,235 pounds, valued at \$17,115, as against \$23,845, valued \$29,925 in 1923, according to the report of the provincial agricultural department. The hop production in the Dominion is all concentrated in this province.

Or's cost up the indigestible parts of their food in the form of pellets

Examination of 300 of these pellets showed that two birds excreted about 225 seeds a day, 175 seeds a day, 49 seeds and one bird.

HOLIDAYS OVERSEAS ATTRACT MANY CANADIANS

Christmas at home has a charm for the average Briton that is not to be denied, for nowhere in the world is there a greater observance of the old Yuletide customs than that which prevails in the British Isles. Friends and relatives of those who have come to this country to make their home in the new Dominion, look forward every year to the coming of the winter season, knowing that this is the time when the people of Western Canada have the time for their disposal for longer holidays necessary to enjoy ocean travel.

This year passenger travel to Great Britain and other continental countries, promises to be heavier than for many years, according to officials of the Canadian National Railways in Western Canada, who state the preliminary inquiries already received indicate that more people are figuring on holidays abroad during the coming winter than for some time. According to the officials of the National system are now making their plans for the handling of such business and the preliminary inquiries of all points within Western Canada and the Atlantic seaboard for the convenience of those who plan overseas trips. Canadian National agents at all points will again ticket passengers on all steamship lines, and as the traffic increases, special trains carrying both day coaches and sleeping cars will be operated from various western points direct to the best side of Montreal, Quebec, Halifax and other ports.

The scheme of English scenery, which has been so long associated with the name of the British Isles, draws just as strongly today as ever, and to many a Western Canadian, these winter holidays give the time for visiting the old homeland scenes and mingling again with childhood friends and with those whom he or she called for Canada to find a home in the new Dominion.

Dates and dates of sailings and special trains will shortly be announced by the Canadian National Railways. Photographs show: (1) Edinburgh; (2) Glasgow; (3) Southampton; (4) London; (5) the great ocean liner which carries C.N.R. passengers overseas.

WORLD HAPPENINGS BRIEFLY TOLD

Formation of a steamship company, which will establish a new trans-Pacific line, has been authorized in Dublin.

Civilian Japanese airmen will undertake a flight from Japan to Hawaii next year, according to the Japanese language newspaper, Hawaii Shimbun. Eight human skeletons unearthed during excavations at St. John's Hospital, Litchfield, Staffs, England, are believed to be more than 700 years old.

Thomas Maloney, commandant of the Irish Free State Air Force, was killed in a flying accident at Curragh. His machine crashed when he was flying low during an aviation tournament.

The Dublin, Ireland docks have been seriously discussing the development of Blackhead Bay as a trans-Atlantic port. It is urged that the voyage to Canada takes from that point only three and a half days.

A measure now is before the diet which, if approved, will allow Japanese women to practice law in the courts of the empire. The measure is backed by the women's suffrage party.

When plans for the erection of a new lighthouse were discussed at a meeting of the Harlequinport port harbor commission, it was stated that there are only two builders of lighthouses in England.

The German government has passed a law, in effect since August 1, making it unlawful for any German municipality to levy a tax against visitors and tourists. Hotel rates probably will be reduced as a result of the law, it is said.

The British postmaster general announces that telephonic communication between Great Britain and Holland can now be obtained (with the exception of the periods between 11 and 12 noon) practically without delay.

The Canadian high commissioner's office in London has been notified of the payment at the Bank of Montreal, London, of Belgium, of \$25,252 as interest on the debt covering the purchase of Canadian horses and mules at the conclusion of the war.

French exports to Germany during the first seven months of 1925 increased in value 40,000,000 francs over the corresponding period of 1924, and from Germany decreased 10,000,000 francs. The exports totaled 2,661,000,000 francs and the imports 1,342,000,000 francs.

Mrs. Louisa Malandane, one of the oldest pioneers in British Columbia, is dead at Victoria in her 85th year. She reached Victoria from England in 1862 on the steamer Tyneham as one of the cargo of fifty marriageable ladies for which that vessel is famous in the Columbia history. She was then Miss Townsend.

New Source Of Alcohol

Discovers Every Baker Is Potential Alcohol Producer

Every bakery is a potential producer of alcohol as a result of the discovery of an Italian engineer, that the inflicting liquid can be extracted in considerable quantities from the fumes given off by baking bread.

Industrialists in the Italian's name. He experimented for four years, using an apparatus constructed at a Berlin bakery before he attained success. His apparatus is capable of extracting approximately a pint and a half of alcohol from the fumes given off during the process of baking 225 pounds of bread.

This recovery process uses neither waste products, nor chemicals. The waste could save German millions of dollars worth of fuel and foodstuffs which are now consumed in the production of alcohol.

Germany suggests that such a cheap source of pure alcohol may revolutionize the bootlegging industry in the United States.

Large Meteorite Falls In North Dakota
A large meteorite crashed to the north of Sioux Falls, N.D., exploding as it struck. The meteorite was intended for scientific study.

A fragment could not be determined since the violent explosion scattered pieces over a large area. The city water works in the spot where the meteorite fell was not undisturbed.

Titled Genealogists in London
Titled genealogists have appeared recently in the ranks of London's business and, and all reports are, have made good. The latest notable success is in the case of Lady Compton Howard, who not long ago entered the service of a well-known firm as a stenographer and secretary to the manager.

Naturalist Believes Insects Good Food

Says Grasshopper Is Fine Eating For Human Beings

A famous naturalist believes that grasshoppers and similar insects would be palatable food for human beings. He says that the grasshopper is a good eating both for men and for children. Either fresh or pickled, it is eaten after the feet, or wings, and the head have been removed; the rest is boiled or stewed and served up in the form of meat balls. After being dried in the sun it is ground to powder, which may be stirred into milk or made into dough and then fried in fat or better with salt. He also refers to the fact that, "Camels greatly like to eat grasshoppers, which are served to them either dried or after being roasted in a heap in a large hole between two layers of live coals. The negroes also eat them cooked in that way." And also that "The wives of the prophets, when anyone sent them a present of grasshoppers, always shared them with the other women."

The Calif. Ome, one day when he was asked whether the use of grasshoppers for food was attention from the entire world. He re-affirmed Britain's devotion to the principle of arbitration.

He pledged Britain's support to the league. The assembly unanimously adopted a resolution authorizing a study of the present situation of the world, and the committee of the league to judge what progress toward general security is achieved by the present situation.

A Courageous Woman
Spending two years in a mountain cavern, at an altitude of 15,000 feet, was among the adventures undertaken by Madame Davis, whose wonderful accomplishments have set scientific and literary Paris talking. This courageous woman, now 50 years of age, has spent fourteen years spent in the most inaccessible regions of China and Tibet. She was accompanied by her adopted son, a young Tibetan, with whom she entered the forbidden city of Lhasa. This small, frail-looking woman, passed three years in a mountainous study of the Tibetan language and ancient manuscripts. Time and again, she provided fuel for the millions of automobiles in daily use. In 1906, before motor car production was well under way, the annual production of automobiles was 61,000,000 barrels. This year it may surpass 1,000,000,000 barrels. In 1906 the gasoline production was 1,000,000 barrels. This year it will probably surpass 250,000,000 barrels. The investment in the oil industry is not a small one. It is estimated that the investment in the oil industry is not a small one. It is estimated that the investment in the oil industry is not a small one.

Providing Fuel For Motors
Billions of Dollars Are Spent Yearly For Gasoline

Many people realize what it means to provide fuel for the millions of automobiles in daily use. In 1906, before motor car production was well under way, the annual production of automobiles was 61,000,000 barrels. This year it may surpass 1,000,000,000 barrels. In 1906 the gasoline production was 1,000,000 barrels. This year it will probably surpass 250,000,000 barrels. The investment in the oil industry is not a small one. It is estimated that the investment in the oil industry is not a small one. It is estimated that the investment in the oil industry is not a small one.

France To Compete At Toronto
Accepts Invitation to Enter Horses at Royal Winter Fair

In a recent announcement from Paris it is stated that the French government has just had accepted an invitation to enter horses in the light horse events at the Royal Winter Fair in Toronto, in November. Premier Poincaré, it is reported, has ordered the holding of a competition in the light horse events, the first three to be sent to Toronto, afterwards going to the New York horse show. It is understood that the Belgian Government will send three officers and mounts to the Toronto and New York shows.

Kipling's Digestion Good
The story of the "big" long-haired New Zealand bird which is supposed to be a distinctive coat of the extinct forest fowl, has been told, a kiwi when he visited that overseas dominion, "down under." The fact that Mr. Kipling survived the meal is a tribute to his digestive powers.

Who Was It Who Recently Said That the Cost of Living Was Like an Everlasting Game?
It looks as if it was coming to come down, but it doesn't.

ECLIPSE FASHIONS

Exclusive Patterns
By Hand Pattern

To Sports Types

The "chance" plan, furnishing hints to the plain silhouette, brings the straight-line dress into a new greater popularity. The jacket has many delightful ways of unexpectedly appearing. All sorts of day-dresses, and on this distinctive model the becoming collar and slightly flared cuffs. The upper portion of the frock displays the modified tunic, and the back extends over the shoulder a little below the shoulder-line forming a yoke to which is sewed the slightly gathered front. The long, light gloves are a pleasing feature, and the buttons trim the front opening. Any woman making for a straight-line dress will be delighted with this pattern. Size 38 but requires 5 yards of fabric. Price 20 cents.

Province,

Honor For Young Poets
Twelve-Year-Old Girl Invited to Join English Authors Society

Nathalia Crane, the 12-year-old poet of Brooklyn, whose book of verse, "The Jambler's Dream," has run into several editions in New York and two in England, has received an invitation from the Society of Authors, Playwrights and Composers.

Membership in this society, it is honored that has been conferred upon few Americans even of more mature years, comes fast upon the shoulders of the first edition of her book in England after they had been on sale only three weeks.

Using Improper English
Warning Signs Placed Near Schools

Any place that a bad place for improper English, but there could scarcely be a worse place than in the vicinity of the schools. The use of bad English in public places should be absolutely discouraged. The matter of placing signs in the vicinity of schools is a matter of importance. The signs should be placed in the vicinity of schools, and the matter of placing signs in the vicinity of schools is a matter of importance.

Plan Forster Reserve
With a view to establishing a 20,000-acre forest reserve, the government has decided to purchase a tract of land in the vicinity of the city of Toronto. The tract is situated in the vicinity of the city of Toronto, and the government has decided to purchase a tract of land in the vicinity of the city of Toronto.

Man Makes Good Resolutions
who he's broke that at any other time.

Convinced Of Success

Amundsen Satisfied He Can Reach Pole By Air

Ronald Amundsen, whose recent attempt to reach the North Pole by air ended in failure, is reported to be planning another flight to the destination—this time in an Italian-built non-rigid dirigible.

Five men now living know the intricacies of the North Pole region as does Amundsen. His knowledge is at the first-hand kind. He has been to the pole in a dirigible, and he is a judge of the possibilities of air navigation there. His own experiences with non-rigid dirigibles in the flight from Spitzbergen, together with those of the subsequent MacMillan expedition, will better equip him to attempt a successful voyage to the pole.

The proposed expedition will be the first of its kind. A lighter-than-air dirigible venture into the climatic and atmospheric uncertainties of the polar regions has thus far never been attempted. It will be recalled that the Shoenhausen was for a brief season being groomed for such a flight, but the plans were called off by the navy department, and the big dirigible was reserved for another destiny.

Amundsen is a man of many talents. He is a pilot, a navigator, a writer, and a man of many talents. He is a pilot, a navigator, a writer, and a man of many talents. He is a pilot, a navigator, a writer, and a man of many talents. He is a pilot, a navigator, a writer, and a man of many talents.

Submarine Tractor For Divers
Electric Motor Drives Device Along Bed of Sea

A submarine diver may now go about his work at the bottom of the sea in a watertight automobile, says Boys' Life. The deep-sea perambulator consists of a steel cylinder, 10 feet long, mounted on a tractor, large enough to accommodate two passengers. It is so constructed that the pressure of the water at a depth of two hundred feet or more will weigh eleven tons on the electric motor inside the cylinder, making it possible to transmit the electric force of the bed of a river or sea. The walls of the car are provided with small windows, looking out in all directions.

Comfortably sheltered in this submarine tank the divers can explore miles of ocean floor without being exposed to the surface. The submarine device is provided with compartments so that divers can leave it if necessary to enter a sunken wreck. It can either be lowered from a vessel or be driven into deep water under its own power. It has been used with excellent results in salvaging wrecks in Long Island Sound.

Exiled To Siberia
Russian Landowners Are Having Their Holdings Confiscated

The Russian authorities are sending into exile hundreds of former landowners and nobles. The confiscation of the lands of the nobles is a part of the policy of the Soviet government. The nobles are being sent to Siberia and other remote parts of the country. The confiscation of the lands of the nobles is a part of the policy of the Soviet government.

Beardmore Gold Field
Work Prospecting

But Report of Geologist Is Not Unlikely Enthusiastic

The Beardmore gold field, which was the object of considerable interest when discovered recently in the north-western part of the province, is a report made by the provincial geologist, to Hon. Charles McCrear, minister of mines, under whose direction, as examination of the district was made.

While the report does not set out the details of the new discovery as a gold proposition, it considers it distinctly worthy of further prospecting work. The report also mentions that the discovery was made during the summer months of the year, and that the discovery was made during the summer months of the year.

Funds For Publicity
Canvases On in Edmonton To Bring in U. S. Settlers

Armed with "prospector's" bulletins, the local board of trade has started on a small canvases for funds to carry on the matter of bringing in settlers from the United States to Alberta. The objective end is \$10,000, and the present figure of \$2,000, representing the total of signed subscriptions now on hand, will have been brought to the point where financing is possible when the publicity campaign can properly be taken care of.

Anthony McKimley, aged 32, of Castle Street, Hibernia, claims to be the best weight-lifter in the world at his age. Before an astonished crowd he raised a 25-pound weight with his left hand to a minute, and 370 times with the right hand in 2 minutes and 45 seconds.

He walks 20 miles every day, and can even stand on his head. He was formerly the world's weight-lifting champion.

My dear Mrs. Croesus, may I put your name down for tickets to Prof. Pandit's course of lectures on Buddhism in the club chamber?

By all means! You know how passionately fond I am of flowers! replied the other woman, very much complimented.

A Record Flight

Tiny Aeroplanes Travel at Rate of Over 300 Miles Per Hour

The air circulates scooped through the air cylinder at 20.5 miles an hour—faster than anything built by man over had travelled before.

Protected from the terrific air pressure by an enclosed cockpit, Lt. Al Williams, naval aviator, made his record as his plane sped over the Kenton Field, Long Island.

The plane is small as aeroplanes go. It is 20 feet from propeller hub to tail fin, 22 feet from wing tip to wing tip, and at its highest point stands only eight feet above the ground. It is driven by a 14-horse Curtiss motor of 615 horsepower. The craft, better known as the "Tiny," is 24.5 miles an hour, the existing record held by the French aviator, Henriest, although advice from Washington said Williams' record would not be recognized officially, because he did not fly over the standard, three-mile motor course.

The flight was one of a number at Curtiss Field, Long Island, which were held to establish an average speed for the purpose of ascertaining whether the plane complied with the government specifications which require an average minimum speed of 25 miles an hour.

Interesting Local Items

It looks new as though we are in for a spell of Indian summer.

Jennie Pearson and Mary Kellett won the distinction of selling the most poppies last Saturday.

Present indications are that potatoes are going to be high in price this winter.

A whist drive and dance is to be held in Howell school, Friday, Nov. 13th. Will start at 8:00 o'clock. Everybody welcome.

Mrs. P. McDermott and son, Jim, leave on tonight's train for Vancouver, where they will reside in future. Mr. McDermott will remain here for the present.

According to reports only about half the threshing is done in Alberta so far this season. The weather has delayed operations considerably. The present fine weather should make a big improvement.

Complete returns of the recent election give Conservatives 117 seats, Liberals 100, Progressives, 24, Labor 2, Independents 1. There is one seat in Quebec vacant as the Liberal member elected has since died.

J. McCallum, of Bedford, was a business visitor in town last Tuesday. He paid this office a friendly visit. Mr. McCallum is a pioneer of Western Canada, and we greatly enjoyed rehearsing with him old times in Manitoba.

Before a gathering of Medical men in Toronto, Prof. W. Blair Bell, of Liverpool, claimed to have discovered a cure for cancer. He cited several cases where remarkable success had been achieved.

Quite a number from Redcliff attended the meeting in Fifth Avenue United Church, Medicine Hat, last Monday evening when St. Rev. G. C. Peterson, D.D., moderator of the United Church of Canada, addressed the meeting. The opinion of all was that the address of the moderator was most inspiring.

The young ladies who undertook the selling of poppies last Saturday were most successful and disposed of a much larger number than usual. At a meeting of the G. W. V. A. held last Sunday, a vote of thanks was passed for Miss Broadfoot who undertook the organization, and to all the young ladies who sold the poppies.

The ladies of St. Mary's Church will give a banquet and dance at Redcliff hall on the evening of Thursday, November 19th. Sumner will be served from 5 to 8 o'clock. Tickets for sumner, etc. After the supper there will be a dance for which Miller's Band Orchestra will supply the music. Tickets for the dance, 50c. All are invited.

C. T. HALL
DRUGGIST

Geo. Moss has been re-engaged as engineer at the pump station.

John Young, who has been in the Brook district for some time, was in town on business this week.

Young ladies are around this week on the annual canvass for the Bible program. They report very encouraging progress.

St. Ambrose W. A. will hold a sale of home cooking and needlework on Saturday, Dec. 3rd. Watch for further particulars later.

A whist drive and social evening will be held in St. Ambrose parish hall on Monday evening, November 16th. An invitation is extended to all to attend.

Robert Forke, leader of the Progressives, says he has no intention of doing or saying anything at the present time to embarrass the government at Ottawa. That should help some.

A special communication of Qu'Appelle Lodge A. F. and A. M. will be held next Tuesday evening, November 17th. When there will be work in the second degree. Visitors welcome.

Armistice Day passed off quietly. Flags were flown over the G. W. V. A. club rooms and Joe Rieser's store. The two minutes silence was observed in the school and in the factories and business places.

With 22 Liberals and 21 Progressives elected in the western provinces, we should not be long now getting the "British" in Hudson's Bay. There were 22 Conservatives elected in these same provinces so that the result in the West has been fairly even.

In official returns tabulated so far throughout the Dominion there were 1002 Liberal votes cast, 1221-275 Conservative, 148,238 Progressive, 37,111 Labor, and 48,414, Independent. The list is yet far from being complete.

Gordon Memorial Choir members were practicing for a concert which they intend to give early next month. Mrs. H. J. Cox and J. E. Turner were guests from here at the Armistice Banquet given by the G. W. V. A. in Medicine Hat last evening.

Bowell's weather prophet says we are going to have a spell of nice weather. Bowell's. Foster is now very far out on his prognostications. He is nearly as good as our own Dr. Patterson. One should be sure to get a guarantee of a nice day just Monday.

R. S. Furber and Joe Delinks, of St. Lawrence, spent Tuesday in town on business. They said the banks were closed in Bowell and they came down here to deposit their money. They said they just received their cheque from the government and didn't want to carry them around.

Those who are returning from the "typical" countries in other parts of the province state that weather conditions have been very satisfactory and that as a result the grain is being badly damaged. They also state that thousands of acres of grain are still in the stock and may probably not be threshed this fall.

The Alberta Soccer association will make a special effort to encourage football in schools throughout the province. At a meeting of the association held in Calgary last week, L. Shortland of Medicine Hat was elected second vice president and S. Goldie a member of the executive.

On the eve of her departure from Redcliff a number of friends of Mrs. V. McDermott met at the home of Mrs. G. Myers last evening at a farewell party. During the evening Mrs. Myers took on behalf of the present, presented Mrs. McDermott with a native hand bag and half a dozen handkerchiefs. Games of various kinds were played and refreshments served, making a very appropriate send-off party.

BIRTHS

HOBNE-In Nurse Patterson's hospital on Sunday November 8th, 1925, to Mr. and Mrs. Wilfred Hobne, a son.

HOLTEN-In Redcliff on Monday, November 9th, to Mr. and Mrs. Joe Holten, a son.

WANTEDS

FOR SALE-1924 Ford touring car. Almost new, a snap for \$225.00. License and extra. Apply at the Review office.

WANTED-A girl to assist with general housework. Small remuneration will be paid to girl wishing to attend school. Apply to Mrs. H. J. Sisson.

Here and There

It is understood a Scottish syndicate has purchased sixteen acres of land adjoining the best residential section of Vancouver, B.C. and will erect one hundred residences there.

Although only three years old the Oliver district of British Columbia has already been noted for its production of very fine cantaloupes. This year the production is expected to be about 25 to 26 carloads.

The 1,250,000-bushel Government Terminal grain elevator being built at Prince Rupert, B.C., will be completed by November 1st, when a test shipment of ten carloads of grain will be made through it.

Notification has been received by the Hon. John S. Martin, Minister of Agriculture for Ontario, that his showing of white Wyandottes at the New York State Fair at Syracuse, had captured the trophy for the best display for the twelfth consecutive year.

By a recent Order-in-Council of the Lieutenant-Governor, premiums for clearing land, which had previously been set at \$6 an acre, were increased to \$2. The Order also provides that the premium will be paid for a maximum of twenty acres of land and, as a result of it, a settler may obtain a grant of \$100 from the Government as a reward for his work.

Considerable progress has been made during the past few years by R. M. Palmer, at Cowichan Bay, B.C., in the cultivation and propagation of new species of gladioli. In his garden, Mr. Palmer has at present growing about 150 different varieties, bulbs having been secured from all parts of the world, even Central Africa contributing its quota to this wonderful collection.

Having completed their tour of Canada as the guests of St. W. Beatty, chairman and president of the Canadian Pacific Railway, the two British journalists left Canada early in October for England, to relate there the story of their experiences and to give their readers the impressions they have gained of the Dominion.
